

Argus ST-7214 – Your dual RJ45 adapter for the 10 Gigabit network

The built-in Intel® chipset X540 offers excellent performance and ensures fast data throughput. In addition, the main processor is further relieved by the ST-7214, so that the network transfer no longer puts as much strain on the main processor, which is often the case when using normal network cards in a server environment. The connection is made through up to two RJ45 ports with a speed of up to 10G.
