Argus ST-7267 – Your RJ45 adapter for the 10 Gigabit network

The built-in Marvell® chipset AQC107 offers excellent performance and ensures fast data throughput. In addition, the main processor is further relieved by the ST-7267, so that the network transfer no longer puts as much strain on the main processor, which is often the case when using normal network cards in a server environment. The connection is made through an RJ45 port with a speed of up to 10G.
